

Fractions

Name: _____

Date: _____

YOU SAW THE VIDEO.
NOW... PRACTICE TIME!

1. Make Equivalent Fractions A

Example: $\frac{2}{7} \rightarrow$ Use single factor to multiply up numerator & denominator $\rightarrow \frac{2}{7} \overset{\times 2}{=} \frac{4}{14}$

Use factor of **2**

1. $\frac{1}{6} \overset{\times 2}{=} \frac{2}{12}$

2. $\frac{2}{5} \overset{\times 2}{=} \frac{4}{10}$

3. $\frac{3}{7} \overset{\times 2}{=} \frac{6}{14}$

4. $\frac{4}{9} = \frac{8}{18}$

Use factor of **3**

5. $\frac{3}{4} \overset{\times 3}{=} \frac{9}{12}$

6. $\frac{7}{10} \overset{\times 3}{=} \frac{21}{30}$

7. $\frac{2}{11} = \frac{6}{33}$

8. $\frac{5}{6} = \frac{15}{18}$

Use factor of **5**

9. $\frac{4}{7} \overset{\times 5}{=} \frac{20}{35}$

10. $\frac{5}{6} \overset{\times 5}{=} \frac{25}{30}$

11. $\frac{3}{8} = \frac{15}{40}$

12. $\frac{11}{12} = \frac{55}{60}$

Use factor of **4**

13. $\frac{2}{3} \overset{\times 4}{=} \frac{8}{12}$

14. $\frac{5}{8} \overset{\times 4}{=} \frac{20}{32}$

15. $\frac{4}{7} = \frac{16}{28}$

16. $\frac{6}{11} = \frac{24}{44}$

Use factor of **6**

17. $\frac{5}{6} \overset{\times 6}{=} \frac{30}{36}$

18. $\frac{3}{5} \overset{\times 6}{=} \frac{18}{30}$

19. $\frac{1}{4} = \frac{6}{24}$

20. $\frac{7}{10} = \frac{42}{60}$

Use factor of **10**

21. $\frac{2}{5} \overset{\times 10}{=} \frac{20}{50}$

22. $\frac{7}{8} = \frac{70}{80}$

23. $\frac{4}{9} = \frac{40}{90}$
